WORKS IN PROGRESS

Monograph

Fi-Sci: Avatars of Science in Fiction, under advance contract for the Theory and Interpretation of Narrative series at the Ohio State University Press

Cognitive studies of analogy suggest that we reason about every experience or concept in terms of another. But what happens with a concept that is indiscernible, such as heredity, or incomprehensible, like an eleven-dimensional space? Our minds reach out to such concepts via analogy as well, but with one crucial difference: the most productive experience in terms of which we can reason about them is fiction. A rhetorical approach reveals that through a process of fiction-science pattern mapping, fiction enhances conceptual access to strange and confounding natural phenomena. When a form in fiction is analogous to a form in science, we can reason about the latter in terms of the former. Though we encounter science without the assumption of fictionality that cloaks us when we read fiction, we carry over the pattern perceived in the story. This carrying over – the recognition of similitude – is the mechanism that broadens conceptual pathways to the indiscernible and the incomprehensible.

Book chapter

“Borges’ Lens: The Symphony of a Rhizomatic Course.” *Approaches to Teaching the Works of Jorge Luis Borges*, edited by José Eduardo González, Modern Language Association (forthcoming).

LANGUAGE PROFICIENCY

Fluent English, Modern Greek, and Hebrew
Intermediate German, Russian, and Spanish

AWARDS, GRANTS, AND HONORS
